

I claim:

1. A method of remodeling a subsisting countertop by casting a polymer-modified concrete mix overlay thereupon in situ, comprising the steps of:
  - providing a subsisting countertop;
  - permanently attaching lath to the subsisting countertop;
  - temporarily attaching edging forms or flow checks around all the free edges of the subsisting countertop for the purpose of checking the flow of a casting compound to the height of a given rise;
  - pouring a polymer-modified cementitious casting compound over the countertop as well as the lath, the outward spill of which is checked by the edging forms and flow checks, until about the level of the given rise is reached; and
  - removing the edging forms and flow checks optionally within a day.
